DRY INSTALLATION

ONTO GRASS

For proper installation of **LASTRA 20mm** on grass or soil for walkways, it is always recommended for the walking surface to be at the same level as the turf. Please follow the instructions below:

1. Preparation of the substrate

Dig out 2" of soil and lay a layer of geotextile. Then fill with a bed of paver sand.

2. Positioning:

Position the pieces according to the pattern chosen, carefully using a rubber hammer on the surfaces to properly set them in place on the support medium.

3. Joints:

It is recommended to lay the pieces with at least 1" of space between them.

ONTO SAND

For proper installation of **LASTRA 20mm** on sand, please follow the instructions below:

1. Preparing the substrate

Dig the soil to a depth of 6"-8" based on the ground's drainage capability. Compact the bottom, applying a minimum slope of 2%. Install a layer of geotextile so that the drainage is well dispersed and roots don't become a problem.

2. Drainage layer

Prepare a drainage layer with 3/4" road base. Level and compact, maintaining the bottom's slope. Lay geotextile on top of the layer of stone chips to keep it from mixing with the substrate.

3. Lateral containment

Install lateral containment suitable for the depth of the substrate and the thickness of the tiles.

4. Setting bed

Make a 1" setting bed with a layer of paver sand. Level the substrate, maintaining a minimum slope of 2%.

5. Installation

Lay the pavers according to the desired pattern, leaving a minimum joint of 3/16" using the appropriate spacers. To improve the stability of the pavers on the substrate, carefully hammer the surface with a rubber hammer.

6. Joints

The joints can be left empty, filled with washed non-clay sand or with grout made of draining polymer sand.

TRADITIONAL INSTALLATION

WITH ADHESIVE

For the correct adhesive installation of **LASTRA 20mm**, it is recommended to follow the instructions below:

1. Preparation of the substrate

Prepare a layer of 10cm made up gravel and pebbles with 16-35mm granulometry. Carry out a concrete layer with minimum thickness of 15-20cm and minimum inclination of 2%.

2. Setting bed

Spread a reinforcement screed of at least 5cm with electro-welded net at 2/3 of the thickness if necessary;

3. Installation of slabs

Install the slabs with the double spreading method and using deformable cement-based premium adhesives (class C2S2 in compliance with EN 12004);

4. Joints

It is recommended to place the slabs leaving a joint of at least 5mm between each other using cement-based premium mortars (in compliance with TCA F101 and F102);

5. Expansion joints

Every 9-16 m² and depending on the size and shape of the floor, introduce expansion joints of 5mm minimum width.

It is possible to lay LASTRA 20mm on draining mixtures composed of gravel and cement, being sure to follow the cement manufacturer's instructions and the project specifications. Outdoor flooring made with LASTRA 20mm on gravel and cement mixtures can be used for walking on.

RAISED INSTALLATION

ON PEDESTALS

For proper installation of **LASTRA 20mm** on raised floors, in the case of even and compact surfaces follow the instructions below:

1. Base and substrate preparation

Prepare a screed with a slope of 2%, followed by a layer of waterproofing. Spread a membrane for draining off the rainwater making sure that it is suitable to withstand the loads and stresses it will be subjected to.

2. Joints

The joint between the pavers, defined by the thickness of the spacers on top of the support, is equal to about 4 mm. For the raised installation of 23^{5/8}"x23^{5/8}" - 60x60 slabs in 3/4" - 20mm thickness, a maximum raise of the foot plan of 3/4" - 2 cm is recommended.

SIZE	UP TO 3/4" (2CM)	ABOVE 3/4" (2CM)

WARNING

- OUTDOOR PAVINGS INSTALLED UNGLUED ABOVE THE GROUND LEVEL ARE SUBJECT TO THE ACTION OF THE WIND, WITH THE RISK, IN SOME CASES, OF BECOMING AIRBORNE. THE MANUFACTURER RECOMMENDS TO REQUIRE THE ASSISTANCE OF A QUALIFIED PROFESSIONAL IN ORDER TO CHECK THE SUITABILITY OF THE INSTALLATION SYSTEM ABOVE THE GROUND ADOPTED, IN ACCORDANCE WITH THE LOCAL LAWS AND REGULATIONS AND THE CONDITIONS OF USE. FAILURE TO DO SO COULD RESULT IN SERIOUS INJURY OR PROPERTY DAMAGE. A CERAMIC SLAB INSTALLED ON A RAISED PEDESTAL SYSTEM MAY FRACTURE ON IMPACT IF A HEAVY OBJECT IS DROPPED ONTO IT FROM A HEIGHT, WITH A RISK OF INJURY TO ANYONE STANDING OR WALKING ON SUCH SLAB. FAILURE TO ADHERE TO THE MANUFACTURER'S INSTRUCTIONS FOR INSTALLATION OF SLABS ON RAISED PEDESTAL SYSTEMS MAY RESULT IN SERIOUS INJURY. FOR FURTHER INFORMATION AND RECOMMENDATIONS CONCERNING THE INSTALLATION SYSTEMS PLEASE REFER TO THE LASTRA 20MM SECTION ON THE ATLAS CONCORDE WEBSITE OR TO THE LASTRA 20MM CATALOGUE.

Technical Information

Cutting

To cut LASTRA 20mm pavers, it is recommended to use a wet saw with at least 1.5 HP power with 8"-10" diamond blade.

Grout lines

In case of dry installation onto gravel, Atlas Concorde recommends leaving a grout line of at least 3/16" between adjacent tiles, using spacers. It is recommended to use spacers in order to maintain a correct joint over time. Grout lines can be also filled with colored polymeric sand matching the tile. Please follow manufacturer's instructions.

Cleaning and maintenance

Cleaning and maintenance procedures can be carried out using a common neutral detergent and a pressure washer: the draining power of inclined surfaces and the presence of open joints between slabs encourages the collection of dirt near the discharge points. For large surfaces, the use of a washer-dryer and single-brush machines with soft nylon brushes is recommended.

Please note that a water patina, due to the surface tension feature of liquids, will tend to form on any outdoor surface even when inclined properly. To remove this patina and obtain the complete drying of the floor, push the water towards joints using a scrubbing-brush or to use a wet and dry vacuum cleaner.
